ELSEVIER SCIENTIFIC PUBLISHERS IRELAND

BioSystems 31 (1993) 243–244

Bio Systems

Subject index

Volume 31

Acquired genomes, protein synthetic systems, symbiosis, individualization, evolution, 121
Algae, cholera, *Vibrio cholerae*, spore-like forms of *Vibrio*, plankton, 209
Anti-tubulin antibodies, *Spirochaeta bajacaliforniensis*, tubulin, cytoplasmic tubules, 161
Aphid, gut microbe, intracellular symbiont, RFLP, 185
Archaebacteria, origin of life, ATPase, evolution, gene duplication, glutamate dehydrogenase, 111
Asymptotic stability, diffusion, living resource, 49
Atmospherics, Gaia, ecosystem, endosymbiosis, Lynn Margulis, James Lovelock, Daisyworld, 85
ATPase, archaebacteria, origin of life, evolution, gene duplication, glutamate dehydrogenase, 111

Bifurcations, incompleteness, non-demoliton measurements, uncertainty principle, 65
Biodiversity, conservation, evolution, extinction, species, pharmaceuticals, ecosystems, rain forests, 235
Biodiversity, hyperparasitism, Rhynie Chert, mycorrhizae, coal, marine and terrestrial ecosystems, 145
BIODOMAINE, viral kingdom, fossil phyla, taxonomic suffixing, six-kingdom system, 99
Biomolecular computing, molecular computing, non-discrete information processing devices, problems of high computational complexity, 3

Cell polarity, embryophyte evolution, charophycean algae, endocellular symbiogenesis, tip growth, plant cytoskeleton, 193
Charophycean algae, embryophyte evolution, endocellular symbiogenesis, tip growth, cell polarity, plant cytoskeleton, 193
Chemotaxis, *Streblomastix strix*, symbiosis, termite, 169
Cholera, *Vibrio cholerae*, spore-like forms of *Vibrio*, algae, plankton, 209
Cladistics, phylogenetic reticulation, symbiosis, 127
Cladistics, phylogenetics reticulation, symbiosis, 130
Climate, Gaia, evolution, species, origin of life, 93
Coal, hyperparasitism, Rhynie Chert, mycorrhizae, biodiversity, marine and terrestrial ecosystems, 145
Conservation, biodiversity, evolution, extinction, species, pharmaceuticals, ecosystems, rain forests, 235
Cyanobacteria, microbial mats, stromatolites, phototrophic sulfur bacteria, *Microcoleus*, *Lyngbya*, microbial succession, deltaic changes, 135
Cytoplasmic tubules, *Spirochaeta bajacaliforniensis*, anti-tubulin antibodies, tubulin, 161

Daisyworld, Gaia, ecosystem, atmospherics, endosymbiosis, Lynn Margulis, James Lovelock, 85
Deltaic changes, microbial mats, stromatolites, phototrophic sulfur bacteria, cyanobacteria, *microcoleus*, *lyngbyci*, microbial succession, 135
Diffusion, asymptotic stability, living resource, 49

Ecosystem, Gaia, atmospherics, endosymbiosis, Lynn Margulis, James Lovelock, Daisyworld, 85
Ecosystems, biodiversity, conservation, evolution, extinction, species, pharmaceuticals, rain forests, 235
Embryophyte evolution, charophycean algae, endocellular symbiogenesis, tip growth, cell polarity, plant cytoskeleton, 193
Endocellular symbiogenesis, embryophyte evolution, charophycean algae, tip growth, cell polarity, plant cytoskeleton, 193
Endosymbiosis, Gaia, ecosystem, atmospherics, Lynn Margulis, James Lovelock, Daisyworld, 85
Evolution, acquired genomes, protein synthetic systems, symbiosis, individualization, 121
Evolution, archaebacteria, origin of life, ATPase, gene duplication, glutamate dehydrogenase, 111
Evolution, biodiversity, conservation, extinction, species, pharmaceuticals, ecosystems, rain forests, 235
Evolution, extinction, virus, 155
Evolution, Gaia, climate, species, origin of life, 93
Extinction, biodiversity, conservation, evolution, species, pharmaceuticals, ecosystems, rain forests, 235
Extinction, evolution, virus, 155

Fisher's theorem, sperm competition, homosexuality, genetic models, twin studies, heterozygote fitness, 223
Food chain, omnivores, persistence, heteroclinic cycle, 39
Fossil phyla, viral kingdom, taxonomic suffixing, six-kingdom system, BIODOMAINE, 99

Gaia, ecosystem, atmospherics, endosymbiosis, Lynn Margulis, James Lovelock, Daisyworld, 85
Gaia, evolution, climate, species, origin of life, 93
Gene duplication, archaebacteria, origin of life, ATPase, evolution, glutamate dehydrogenase, 111
Genetic models, sperm competition, homosexuality, Fisher's theorem, twin studies, heterozygote fitness, 223
Glutamate dehydrogenase, archaebacteria, origin of life, ATPase, evolution, gene duplication, 111
Gut microbe, aphid, intracellular symbiont, RFLP, 185

Heteroclinic cycle, food chain, omnivores, persistence, 39
Heterozygote fitness, sperm competition, homosexuality, genetic models, Fisher's theorem, twin studies, 223
Homosexuality, sperm competition, genetic models, Fisher's theorem, twin studies, heterozygote fitness, 223

Hyperparasitism, Rhynie Chert, mycorrhizae, biodiversity, coal, marine and terrestrial ecosystems, 145

Incompleteness, bifurcations, non-demoliton measurements, uncertainty principle, 65
Individualization, acquired genomes, protein synthetic systems, symbiosis, evolution, 121
Intensity coding, neuronal model, membrane potential, olfaction, stochastic process, 15
Intracellular symbiont, aphid, gut microbe, RFLP, 185

James Lovelock, Gaia, ecosystem, atmospherics, endosymbiosis, Lynn Margulis, Daisyworld, 85

Living resource, difusion, asymptotic stability, 49
Logistic model, world population, population growth, 59
Lyngbya, microbial mats, stromatolites, phototrophic sulfur bacteria, cyanobacteria, *Microcoleus*, microbial succession, deltaic changes, 135
Lynn Margulis, Gaia, ecosystem, atmospherics, endosymbiosis, James Lovelock, Daisyworld, 85

Marine and terrestrial ecosystems, hyperparasitism, Rhynie Chert, mycorrhizae, biodiversity, coal, 145
Membrane potential, neuronal model, intensity coding, olfaction, stochastic process, 15
Microbial mats, stromatolites, phototrophic sulfur bacteria, cyanobacteria, *Microcoleus*, *Lyngbya*, microbial succession, deltaic changes, 135
Microbial succession, microbial mats, stromatolites, phototrophic sulfur bacteria, cyanobacteria, *Microcoleus*, *Lyngbya*, deltaic changes, 135
Microcoleus, microbial mats, stromatolites, phototrophic sulfur bacteria, cyanobacteria, *Lyngbya*, microbial succession, deltaic changes, 135
Molecular computing, biomolecular computing, non-discrete information processing devices, problems of high computational complexity, 3
Mycorrhizae, hyperparasitism, Rhynie Chert, biodiversity, coal, marine and terrestrial ecosystems, 145

Neuronal model, membrane potential, intensity coding, olfaction, stochastic process, 15
Non-demoliton measurements, bifurcations, incompleteness, uncertainty principle, 65
Non-discrete information processing devices, molecular computing, biomolecular computing, problems of high computational complexity, 3

Olfaction, neuronal model, membrane potential, intensity coding, stochastic process, 15
Omnivores, food chain, persistence, heteroclinic cycle, 39
Origin of life, archaebacteria, ATPase, evolution, gene duplication, glutamate dehydrogenase, 111
Origin of life, Gaia, evolution, climate, species, 93

Persistence, food chain, omnivores, heteroclinic cycle, 39
Pharmaceuticals, biodiversity, conservation, evolution, extinction, species, ecosystems, rain forests, 235
Phototrophic sulfur bacteria, microbial mats, stromatolites, cyanobacteria, *Microcoleus*, *Lyngbya*, microbial succession, deltaic changes, 135
Phylogenetic reticulation, cladistics, symbiosis, 127
Phylogenetics reticulation, cladistics, symbiosis, 130
Plankton, cholera, *Vibrio cholerae*, spore-like forms of *Vibrio*, algae, 209
Plant cytoskeleton, embryophyte evolution, charophycean algae, endocellular symbiogenesis, tip growth, cell polarity, 193
Population growth, world population, logistic model, 59
Problems of high computational complexity, molecular computing, biomolecular computing, non-discrete information processing devices, 3
Protein synthetic systems, acqired genomes, symbiosis, individualization, evolution, 121

Rain forests, biodiversity, conservation, evolution, extinction, species, pharmaceuticals, ecosystems, 235
RFLP, aphid, gut microbe, intracellular symbiont, 185
Rhynie Chert, hyperparasitism, mycorrhizae, biodiversity, coal, marine and terrestrial ecosystems, 145

Six-kingdom system, viral kingdom, fossil phyla, taxonomic suffixing, BIODOMAINE, 99
Species, biodiversity, conservation, evolution, extinction, pharmaceuticals, ecosystems, rain forests, 235
Species, Gaia, evolution, climate, origin of life, 93
Sperm competition, homosexuality, genetic models, Fisher's theorem, twin studies, heterozygote fitness, 223
Spirochaeta bajacaliforniensis, anti-tubulin antibodies, tubulin, cytoplasmic tubules, 161
Spore-like forms of *Vibrio*, cholera, *Vibrio cholerae*, algae, plankton, 209
Stochastic process, neuronal model, membrane potential, intensity coding, olfaction, 15
Streblomastix strix, symbiosis, termite, chemotaxis, 169
Stromatolites, microbial mats, phototrophic sulfur bacteria, cyanobacteria, *Microcoleus*, *Lyngbya*, microbial succession, deltaic changes, 135
Symbiosis, *Streblomastix strix*, termite, chemotaxis, 169
Symbiosis, acquired genomes, protein synthetic systems, individualization, evolution, 121
Symbiosis, cladistics, phylogenetic reticulation, 127
Symbiosis, cladistics, phylogenetics reticulation, 130
Taxonomic suffixing, viral kingdom, fossil phyla, six-kingdom system, BIODOMAINE, 99

Termite, *Streblomastix strix*, symbiosis, chemotaxis, 169
Tip growth, embryophyte evolution, charophycean algae, endocellular symbiogenesis, cell polarity, plant cytoskeleton, 193
Tubulin, *Spirochaeta bajacaliforniensis*, anti-tubulin antibodies, cytoplasmic tubules, 161
Twin studies, sperm competition, homosexuality, genetic models, Fisher's theorem, heterozygote fitness, 223

Uncertainty principle, bifurcations, incompleteness, non-demoliton measurements, 65

Vibrio cholerae, cholera, spore-like forms of *Vibrio*, algae, plankton, 209
Viral kingdom, fossil phyla, taxonomic suffixing, six-kingdom system, BIODOMAINE, 99
Virus, evolution, extinction, 155

World population, population growth, logistic model, 59
